

Value Stream Improvement

This structured process is often referred to as value-stream mapping. It is designed to examine and improve the flow of material and information through you to your customers and help you eliminate waste and improve capability.

We begin with a map and understanding of your overall system's current state. Armed with an understanding of how your organization is working at a systems level, we articulate an ideal state of the same process, uncover existing gaps and identify barriers. By prioritizing resources and opportunities, we then help you craft improvement projects that will have the greatest impact on your success.

Value Stream Improvement allows leaders and those working in the process to better understand how their actions affect overall performance and what steps need to be taken to improve. It is a method of gaining high agreement from all involved on the current state, the ideal state and the actions required to close that gap.
